

ABOUT THE PROJECT

XenoFantom is a Binance Smart Chain token project that aims to provide investors with great exposure to the Fantom token.

Compared to many Layer 1 blockchain tokens, Fantom has a superior blockchain technology that utilizes Directed Acyclic Graph (DAC) with its novel Lachesis consensus algorithm. Many have yet to discover the power of their superior technology, making it an undervalued token that has immense growth potential.

Hedge funds that are backing Fantom will create the Y Combinator for Fantom. Y Combinator is a startup accelerator famous for incubating AirBNB, Coinbase, DropBox & many others. This further strengthens the strong fundamentals of Fantom.

By simply buying & holding XenoFantom, you consistently receive a massive amount of 14% Fantom (FTM) auto rewards. 7% from all buy transactions + 7% from all sell transactions.

Whenever people buy or sell, you receive FTM auto-rewards in your wallet. By having XenoFantom + Fantom (auto-reward) in your portfolio, you enjoy the unstoppable synergy from the rapid market capital growth of XenoFantom + Fantom.

The competitive advantages of XenoFantom:

- Much higher than industry-average: 14% FTM auto-reflections
- Secured, safe & transparent investing environment of XenoFantom project
- Immense PROFIT Synergy from XenoFantom + Fantom price rally

TOKENOMICS & COMMUNITY
